Senslytics is a venture capital backed start-up that develops proprietary causation-based AI applications to reduce risks faced by energy companies. Senslytics works on problems that existing AI has been unable to solve, like pipeline failures due to corrosion, which can cause significant financial, environmental, and human safety issues. This has resulted in working with three companies on the Global Fortune 500.

Senslytics has been granted seven patents and was recently awarded a \$500k grant by OCAST (Oklahoma Center for the Advancement of Science and Technology) to continue its work developing AI models that merge domain expert knowledge with data to provide definitive answers even in situations with limited data. Our company values the ability to think creatively and openness to having ideas challenged. We strive to create a tight-knit team dedicated to delivering for our customers regardless of the challenge.

We are seeking a highly motivated and bottom-line oriented individual for a fast-paced full stack developer role. The ideal candidate thrives in a dynamic environment demonstrating the ability to work independently and proactively.
